Sirs,

II believe that Satellite radio service is invaluable for local traffic and weather reports, where else can one get the current traffic updates every minute or so, before XMRadio I had to wait and hear local traffic reports on a news channel every 10 minutes (traffic on the two's) in this fast pace world those extra 8 mins could mean the difference between getting caught in traffic and going around the problem, there by helping the police and emergency personal handle the traffic much better, without the fast reports more traffic would be on the seen, making it worst for everyone, this I believe is common sense.

I don't think its right that some lobby group can try to take this service away from the public, XMRadio gives this service away to there subscribers for FREE, not only being a good promotion, but XMRadio is doing a public service.

Please reject the NAB's petition 04-160 for the safety of all concerns, not to mention the time and fuel wasted in traffic.

Thank You , John Cochran
